

Web Technologies Lab - 04

Lab Task: Designing a Simple University Website Using HTML & CSS

Course	Web Technologies Lab
Task	3
Duration	2 Hours
Submission	index.html and stylee.css

Objective

Develop a professional single-page college website using HTML5 and CSS3 while applying fundamental CSS concepts such as selectors, box model, layout, positioning, display properties, max-width, overflow, and z-index.

Scenario

You have been hired as a front-end web developer to create the homepage of ABC College. The page should be neat, attractive, and easy to navigate.

Requirements

- Create a Header with the college name and a navigation menu containing at least five menu items.
- Add a Welcome section with a heading, short description, and an 'Apply Now' button.
- Create a Courses section containing three course cards. One card must display a 'New' badge.
- Create a Notice Board with a fixed height and enough text to demonstrate overflow.
- Create a Campus section with an image placeholder and an information box overlapping the image.
- Add a fixed 'Contact Us' button.
- Create a Footer containing the college name, email address, and phone number.

CSS Concepts (Must Be Used)

- Universal, Element, Class, Group, and ID Selectors
- Box Model (Margin, Border, Padding)
- Display (Block, Inline, Inline-block)
- Position (Relative, Absolute, Fixed, Sticky)

- max-width, overflow, z-index

Instructions

- Use an external CSS file (stylee.css).
- Do not use any CSS framework.
- Write clean, properly indented code.
- Use meaningful class names.

Upload in GitHub in the lab time. Must create different folder for this task in git
